

WHAT IS CLAIMED IS:

1. A combination of spoke and rim, wherein the rim comprises a plurality of holes defined therethrough and each hole has a recess defined in an inner periphery of the rim, a diameter of the recess is larger than a diameter of the hole, the spoke has a threaded hole defined longitudinally in an end thereof and the end of the spoke is engaged with the recess, a screw extends through the hole and threadedly engaged with the threaded hole in the end of the spoke.

2. The combination as claimed in claim 1, wherein the screw includes a head and a shank which has threads, a diameter of the head is larger than a diameter of the hole in the rim.

3. A combination of spoke and hub, wherein the hub comprises a plurality of holes defined through flanges thereof and each hole has a connection member extending therethrough, each connection member has a curve shank and a head, a distal end of the curve shank has a threaded portion located beyond the hole and threadedly connected to an end of a spoke.

4. The combination as claimed in claim 3, wherein the end of the spoke has a threaded hole defined longitudinally therein.
